

PLASTIC CABLE REELS

Together with our partner Purus Plastics we have developed a new plastic reel. We now can supply onepiece plastic reels with no mechanical joints, providing an extremely smooth reeling surface.

The plastic reels are distinguished by the various benefits they offer, including resistance to weather conditions, chemicals and oils. They are very versatile. The plastic flanges are made of 100 % recycled material and therefore contribute significantly to minimizing their environmental impact.

Furthermore, we are still selling COLIBRI, which is 100% recyclable. You will also save money regarding transportation and storage. The COLIBRI is foldable and its volume can be reduced by a third, compared to a conventional coil.

The COLIBRI is available with a diameter of 600 mm and 750 mm.

REEL TYPES

Oneway reel
Multiway reel

DETAILS

- One-piece cable reels
- No delicate quick-release catches
- Variable design
- Cable fixing hole
- Label area
