

WOODEN CABLE DRUMS

Depending on the requirements, we process untreated, IPPC treated or pressure impregnated softwood for our wooden cable drums. All our wood is PEFC certified and made from sustainable forestry.

We manufacture wooden cable drums with a flange diameter of 600 mm to 4,500 mm and a load capacity of up to 60 tons. Our selection of cores comprises of core bars made of softwood and core bars made of plastic and steel.

Or you can draw on our iron-tired wooden cable drums as a cheaper alternative to the cable reel of steel. As a multi-reel it fulfills the same requirements and provides a higher load capacity of up to 60 tons and a long service life. We offer these reels with or without boarding fold for a cladding made of wood or sheet metal.
